Proposed IJOBS Grant Application – Water Treatment Facility, Aplington, Iowa

To whom it may concern:

Ryken Engineering is the Consulting Engineer for the City of Aplington Water Treatment Plant. We are designing the proposed project, and intend for the proposed improvements to meet local and state codes for this type of construction. The project includes the modification of an existing building, installation of piping and water treatment components. We propose to specify the high service pumps, heating units, insulation, and lighting fixtures and other items to conform with Energy Star ® and/or building energy code standards. Although LEED certification will not be sought for this project, certain LEED components will be included into the design where allowable due to the long term cost savings expected from their use in the facility.

Sincerely,

Chad Billings
Ryken Engineering

cc: Deb Prier, City of Aplington Clerk
